# IKAM Benchmark Case Spec (idea.md)

## Identity

- Case ID: m-software-v01
- Business name: LatticeOps
- Industry / domain: Software (B2B ops workflow + light analytics)
- Business model: SaaS subscription (mid-market)
- Locations / operating region: US (hybrid; one HQ)
- Size tier: m
- Org maturity: emerging product org; decent hygiene but still messy around metrics

## High-level description

- One-liner: A mid-sized SaaS company shipping regularly, with some roadmap drift and metric definition inconsistencies.

## Operating model

- Functions:
  - Product
  - Engineering
  - Sales
  - Customer Success
  - Finance
  - Security (small)
- Key roles:
  - Jamie Ross — CEO
  - Priya Mehta — CTO
  - Alex Chen — Head of Product
  - Sam Rivera — Eng Manager
  - Taylor Kim — Head of CS
  - Morgan Shah — Finance Lead
  - Rina Patel — Security (part-time)

## Chaos profile (new pick; tracked)

- Overall chaos level (1–5): **3**
- Rationale: fewer artifacts than l/xl; still multiple sources for KPIs and roadmaps.
- Where chaos lives:
  - ☒ KPI definition mismatch (active users vs active accounts)
  - ☒ roadmap vs sprint reality drift
  - ☒ inconsistent incident follow-through

## Intentional contradictions

1) Ship date:
   - Roadmap deck: Feature “Garnet” ships in April
   - Sprint log shows it pushed to May
2) KPI:
   - CS uses “active accounts”
   - Product uses “weekly active users”
3) Incident:
   - Postmortem narrative blames vendor
   - Metrics show internal backlog spike

## Timeline of significant events

- 2025-11: Introduced usage-based add-on.
- 2026-02-09: Backlog spike incident.
- 2026-02-21: KPI definition debate escalates.

## Benchmark goals (IKAM)

- Queries:
  1) “What is Feature Garnet status and ship date?”
  2) “What caused the Feb 9 incident?”
  3) “What are the KPI definitions and how do they differ by team?”
